Fundamentals of Predictive Text Mining (Texts in Computer Science) Sholom M. Weiss, Nitin Indurkha, Tong Zhang

One consequence of the pervasive use of computers is that most documents originate in digital form. Widespread use of the Internet makes them readily available. Text mining – the process of analyzing unstructured natural-language text – is concerned with how to extract information from these documents. Developed from the authors' highly successful Springer reference on text mining, *Fundamentals of Predictive Text Mining* is an introductory textbook and guide to this rapidly evolving field. Integrating topics spanning the varied disciplines of data mining, machine learning, databases, and computational linguistics, this uniquely useful book also provides practical advice for text mining. In-depth discussions are presented on issues of document classification, information retrieval, clustering and organizing documents, information extraction, web-based data-sourcing, and prediction and evaluation. Background on data mining is beneficial, but not essential. Where advanced concepts are discussed that require mathematical maturity for a proper understanding, intuitive explanations are also provided for less advanced readers. Topics and features: presents a comprehensive, practical and easy-to-read introduction to text mining; includes chapter summaries, useful historical and bibliographic remarks, and classroom-tested exercises for each chapter; explores the application and utility of each method, as well as the optimum techniques for specific scenarios; provides several descriptive case studies that take readers from problem description to systems deployment in the real world; includes access to industrial-strength text-mining software that runs on any computer; describes methods that rely on basic statistical techniques, thus allowing for relevance to all languages (not just English); contains links to free downloadable software and other supplementary instruction material. *Fundamentals of Predictive Text Mining* is an essential resource for IT professionals and managers, as well as a key text for advanced undergraduate computer science students and beginning graduate students. Dr. Sholom M. Weiss is a Research Staff Member with the IBM Predictive Modeling group, in Yorktown Heights, New York, and Professor Emeritus of Computer Science at Rutgers University. Dr. Nitin Indurkha is Professor at the School of Computer Science and Engineering, University of New South Wales, Australia, as well as founder and president of data-mining consulting company Data-Miner Pty Ltd. Dr. Tong Zhang is Associate Professor at the Department of Statistics and Biostatistics at Rutgers University, New Jersey.

From reader reviews:

Gregory Mackenzie:

The book Fundamentals of Predictive Text Mining (Texts in Computer Science) make you feel enjoy for your spare time. You should use to make your capable far more increase. Book can to get your best friend when you getting stress or having big problem using your subject. If you can make looking at a book Fundamentals of Predictive Text Mining (Texts in Computer Science) to be your habit, you can get a lot more advantages, like add your own personal capable, increase your knowledge about some or all subjects. It is possible to know everything if you like open and read a publication Fundamentals of Predictive Text Mining (Texts in Computer Science). Kinds of book are a lot of. It means that, science reserve or encyclopedia or other individuals. So , how do you think about this e-book?

Danny Jarosz:

As people who live in the actual modest era should be up-date about what going on or info even knowledge to make these keep up with the era and that is always change and advance. Some of you maybe will update themselves by reading books. It is a good choice in your case but the problems coming to anyone is you don't know which one you should start with. This Fundamentals of Predictive Text Mining (Texts in Computer Science) is our recommendation so you keep up with the world. Why, as this book serves what you want and want in this era.

Adelina Foreman:

Is it you actually who having spare time then spend it whole day by simply watching television programs or just resting on the bed? Do you need something new? This Fundamentals of Predictive Text Mining (Texts in Computer Science) can be the solution, oh how comes? A book you know. You are consequently out of date, spending your time by reading in this brand new era is common not a nerd activity. So what these ebooks have than the others?

Danny Solberg:

Guide is one of source of information. We can add our knowledge from it. Not only for students and also native or citizen need book to know the change information of year in order to year. As we know those textbooks have many advantages. Beside many of us add our knowledge, can also bring us to around the world. From the book Fundamentals of Predictive Text Mining (Texts in Computer Science) we can have more advantage. Don't you to be creative people? To become creative person must choose to read a book. Just simply choose the best book that suitable with your aim. Don't be doubt to change your life at this book Fundamentals of Predictive Text Mining (Texts in Computer Science). You can more appealing than now.
