Information Systems and Technology Education: From the University to the Workplace (Premier Reference) Glenn R. Lowry

Since its beginnings, the growth and development of the information systems and technology industry has been limited and shaped by the availability of sufficient numbers of skilled technical and professional workers. Information Systems and Technology Education: From the University to the Workplace presents a multifaceted, global view of the human dynamics of education, supply, demand, and career development in the information systems and technology industry. Information Systems and Technology Education: From the University to the Workplace exhibits a range of cultural and stakeholder perspectives, focusing on the profession, the professionals, the perspectives of students and new graduates, and common issues and challenges ahead. Information Systems and Technology Education: From the University to the Workplace provides an improved synopsis to understand and meet the challenges of providing improved integration between the stakeholders in planning, and improving their contribution to educating and employing an optimal supply of information systems and technology graduates in the decades to come.
